**FUEL SURCHARGES**

**ITEM 100**

Application: This publication applies to: (1) all regulated common carrier line haul tariff rates existing or established by EVWR on or after April 26, 2007; and (2) all line haul freight rates and charges with respect to exempt traffic, and line haul freight rates and charges in contracts, private price quotations or other pricing documents, that both reference this publication and are entered into or issued and effective on or after April 26, 2007.

EVWR will apply a fuel surcharge to the line haul freight charge(s) based on the monthly average price of US No. 2 Diesel Retail Sales by All Sellers (Cents per Gallon) On-Highway Diesel (OHD). The source for the price of OHD is the U.S. Department of Energy’s EIA Retail On-Highway Diesel Prices Report, US Average, whose monthly average price is available under “2-M Diesel Prices – All Types” at [http://tonto.eia.doe.gov/oog/info/wohdp/diesel\\_detail\\_report\\_combined.asp](http://tonto.eia.doe.gov/oog/info/wohdp/diesel_detail_report_combined.asp).

In calculating the OHD Average Price, the average price will be rounded to the nearest 1/10<sup>th</sup> of a cent applying conventional rounding principles. The fuel surcharge will be 1¢ per mile for every 4¢ per gallon, or portion thereof, by which the OHD Average Price for the calendar month two months prior to the calendar month of shipment exceeds 199.9 cents.

If DOE-EIA ceases publication of the above information, EVWR will employ a suitable substitute source of price or measure.

When the monthly average price of OHD equals or exceeds \$2.00 in the second calendar month prior to the month in which the fuel surcharge is applied, the fuel surcharge rate per mile as shown in the OHD Fuel Surcharge Table will be applied to the line haul freight charge. For example, the surcharge amount in April will be calculated from the monthly US average OHD price during February. Rail mileage is

calculated using 3<sup>rd</sup> party software PC\*Miler / Rail Version 13 (ALK Technologies) on each line haul movement, calculating total trip length for all carriers in the route, using the option for shortest distance from origin to interchanges, to destination. Fractions of a mile will be rounded to the next highest number. For example, if the actual line haul mileage summed for all carriers in the route is 1500.1 miles, the surcharge will be applied for 1501 miles. The applicable mileage will be the mileage on the date the line haul freight charge becomes effective. Where the rail miles are not available through PC\*Miler, EVWR will calculate and publish the mileage independently.

For example: When the OHD rate is \$2.49, the fuel surcharge for a line haul movement of 1,500 miles would be \$.13 x 1,500 = \$195.

The date of surcharge shall be applied as follows:
